

## Clinical Decision Making in High Dependency Midwifery Care

Nurses play a vital role in maximizing health and healthcare experiences of pregnant women, new mothers and infants. Clinical judgment, specialized clinical knowledge and decision-making skills are essential in identifying early clinical deterioration in women requiring high dependency midwifery care. This module will enable participants to rehearse and refine practice in relation to the recognition, response and escalation of care of the acutely unwell women during pregnancy, intrapartum and post-natal period

## Learning Outcomes

- Explain the concept of high dependency midwifery care
- Discuss the scope of obstetric high dependency unit
- Describe systematic assessment in obstetrics
- Explore and identify high dependency care needs of pregnant women
- Discuss various high dependency clinical scenarios and management
- Apply clinical decision-making skills in different high dependency clinical scenarios

## Training Material

- Multimedia audio visual aids
- Maternity task trainers
- Assessment tools

## Duration

6 hrs

## No. of Participants per Instructor
