

Airway Management

Airway Management skills are critical in saving the life of victims who experience hypoxia due to airway obstruction. Improving skills to identify a compromised airway and maintaining airway patency can help bring down death rates. The aim of this module is to train nurses on various challenging airway management techniques with the purpose of maintaining and restoring a safe and effective pathway for oxygenation and ventilation.

Learning Outcomes

- Identify potential causes of airway obstruction
- Discuss the goal of airway management
- Demonstrate different airway assessment techniques
- Explain different oxygen delivery methods
- Discuss various airway adjuncts used in resuscitation
- List out the indications and contraindications of each airway adjunct
- Demonstrate different airway management skills used in resuscitation

Training Material

- Multimedia audio visual aids
- Various assessment tools
- Handouts

Duration

6 hrs
