

Fundamentals of Paediatric Life Support

Fundamentals of Paediatric Life Support

Fundamentals of Paediatric life Support comprises of a series of essential skills and protocols for managing paediatric emergencies, including respiratory distress, respiratory failure, and cardiopulmonary arrest. Healthcare professionals play a crucial role in delivering critical care and ensuring the child's stability during emergencies. The aim of this module is to equip participants with knowledge and skills necessary to effectively manage paediatric emergencies.

Learning Outcomes:

- Recognize early signs of critical illness in children
- Identify early signs of cardiopulmonary arrest
- Demonstrate use of airway and oxygen adjuncts for optimal ventilation
- Differentiate between respiratory distress and respiratory failure
- Apply early intervention strategies in respiratory distress and failure
- Discuss paediatric drugs and dosages during resuscitation
- Demonstrate CPR for infants and children
- Explain post-cardiac arrest management

Training Materials

- Multimedia Audio Visual Aids
- Handouts

Learning Activity

- Simulation based clinical scenarios
- Practice session on task trainers
- Practice session in a simulated environment
- Knowledge and skill assessment

Duration

6 hours

Number of Participants

15
