

Infection Control

Infection Control

Infection prevention and control plays a vital role in maintaining a safe and effective environment for everyone by reducing the risk of potential spread of illness. Following right infection control measures is an important component of nursing to protect both patients and health care professionals from contracting infections. The aim of this module is to impart essential knowledge and skills on various infection control protocols to be followed by health care professionals while providing patient care.

Learning Outcomes

- Discuss key terms related to infection prevention and control
- List out various health care associated infections
- Explain the chain of infection
- Describe different infection prevention methods used in health care settings
- Discuss transmission based precautions
- Review biomedical waste management protocols
- Apply infection prevention and control protocols in simulated scenarios

Training Material

- Multimedia audio visual aids
- Simulation scenarios
- Handouts

Learning Activity

- Discussion on clinical scenarios
- Critical thinking activities
- Knowledge and skill assessment

Duration

6 hrs

Number of Participants

15
